

Employee Onboarding & Internal Operations Guide

TechNova Solutions Pvt. Ltd.
Enterprise Policy & Knowledge Base

Document ID	TN-OPS-ONB-005
Version	3.0
Effective Date	01 June 2026
Document Owner	People Operations
Classification	Internal Use
Review Cycle	Annual or upon material change

Document purpose

This controlled document defines company-wide guidance, procedures, responsibilities, approval rules, exceptions, and frequently asked questions. It is written as an operational reference for employees, managers, HR, IT, and support teams.

Important note

This is a fictional enterprise document created for the AI Document Intelligence & Enterprise Knowledge Assistant portfolio project. It is not an actual TechNova corporate policy and must not be used as legal, HR, financial, or security advice.

9. First 60 Days
10. First 90 Days
11. Manager Checklist
12. FAQs

Before Joining

Pre-boarding

People Operations coordinates the offer, joining date, identity and employment documentation, and pre-joining communication. IT prepares standard equipment and initial access based on the approved role.

Managers should confirm the role description, reporting line, initial objectives, and required project access before the employee joins.

Documentation

Employees should provide the documents requested in their appointment or onboarding instructions. Documents should be submitted through approved channels rather than personal messaging applications.

Day One

Welcome and orientation

The first day normally includes HR orientation, team introduction, policy acknowledgement, security awareness, and confirmation of equipment and access.

The manager should explain team responsibilities, current priorities, meeting routines, communication channels, and the first-week plan.

Identity and access

Employees receive access based on role and approved requests. Initial passwords or activation links should be handled securely and changed according to system instructions.

First Week

Role setup

The employee should understand the team's product or service, key systems, documentation locations, and immediate deliverables.

Managers should schedule short check-ins during the first week to identify access blockers and clarify expectations.

Learning

Mandatory security and compliance training should be completed within the required period. Technical onboarding may include code repositories, development standards, deployment practices, and support procedures.

IT Access

Least privilege

Access is provisioned according to job responsibilities. Employees should not request elevated permissions merely for convenience.

Access to production, customer data, financial systems, and security tools may require additional approval.

Access issues

If access does not work, employees should raise an IT ticket with the system name, error message, business need, and manager or project information where required.

HR and Payroll Setup

Employee profile

Employees should verify legal name, contact details, bank information, tax information, emergency contact details, and benefit selections in the HR system.

Changes to sensitive information should be made through authenticated HR workflows.

Payroll

Employees should review the first payslip and promptly report discrepancies through the payroll support process.

Team Onboarding

Team context

Managers should explain how work enters the team, how priorities are decided, who approves releases, where documentation lives, and how incidents are escalated.

New employees should identify key stakeholders and understand the expected communication channels.

Knowledge sharing

Employees are encouraged to maintain documentation as they learn. Repeated questions should be converted into reusable internal knowledge where appropriate.

Security Training

Required training

New employees must complete assigned security awareness training. Topics may include phishing, passwords, data handling, acceptable use, secure development, and incident reporting.

Completion status may be tracked by the security or learning team.

Incident reporting

New employees should know how to report suspected phishing, lost devices, exposed credentials, accidental data sharing, and other security concerns.

First 30 Days

Expected outcomes

By the end of the first 30 days, the employee should understand the role, team workflows, core systems, major stakeholders, and current priorities.

The manager should provide feedback and identify any training or access gaps.

First 60 Days

Increasing ownership

Employees should begin owning defined tasks or workstreams, participating in planning, and contributing improvements to documentation or processes.

Managers should review progress against initial objectives and adjust priorities when business needs change.

First 90 Days

Confirmation readiness

For employees on probation, the manager and HR review role performance, behaviour, learning progress, attendance, and readiness for confirmation according to the applicable process.

Employees should receive clear feedback and understand any development areas.

Manager Checklist

Required manager actions

Before joining: confirm role and access needs. Day one: introduce the team and priorities. Week one: remove access blockers. First month: review progress. Before probation end: provide documented feedback and confirmation recommendation.

Frequently Asked Questions

Who prepares my laptop?

IT prepares standard equipment based on the approved role and onboarding request.

When do I get system access?

Access is provisioned after the required approvals and may vary by system sensitivity.

What should I do if I cannot access a required system?

Raise an IT ticket with the system name, error details, and business context.

What happens during the first 30 days?

You learn the role, systems, stakeholders, team workflows, and begin taking ownership of defined work.

Is probation automatically completed after six months?

No. The applicable confirmation process and written decision determine the outcome.
